## EDUCATION

|                                                                                                                                                                                                                                                                                     |              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <b>University of California, Berkeley</b><br><i>B.S. Electrical Engineering and Computer Sciences (EECS), expected Dec 2026</i> <ul style="list-style-type: none"><li>Coursework: Data Structures, Algorithms, Machine Learning, Discrete Math, Linear Algebra, Robotics.</li></ul> | Berkeley, CA |
| <b>Stanford University, Summer Session</b><br><i>CS 229: Machine Learning</i>                                                                                                                                                                                                       | Stanford, CA |

## SKILLS

**AI/ML:** PyTorch, TensorFlow, LLaVA, Gemini API, agent evaluation, benchmark design, model workflows  
**Languages:** Python, TypeScript, C++, Java, SQL  
**Systems:** FastAPI, React, Docker, Linux, Git, Modal, REST APIs, CI/CD

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>ENGR Team Co-Lead, UC Berkeley BAIR - Agent's Last Exam</b><br><i>AI agent evaluation, benchmark infrastructure</i> <ul style="list-style-type: none"><li>Co-first author on a NeurIPS 2026 benchmark submission evaluating frontier AI agents on real professional workflows across 55 sub-fields.</li><li>Converted expert-submitted tasks into executable benchmark instances with reproducible GUI/CLI runs and deliverable-based scoring.</li></ul> | Jan 2026 - Present  |
| <b>Robotics AI Engineering Intern, Starbot</b><br><i>Agent harness for restaurant service robots</i> <ul style="list-style-type: none"><li>Built agent harness with tool APIs, task-state orchestration, and recovery paths for ordering, delivery, and customer-service workflows.</li></ul>                                                                                                                                                               | Dec 2025 - Feb 2026 |
| <b>Undergraduate Researcher, UC Berkeley - Prof. Avideh Zakhor</b><br><i>UAV small-object detection and tracking</i> <ul style="list-style-type: none"><li>Benchmarked UAV detection methods against 1,600 manually annotated DJI frames and evaluated optical-flow/background-compensation pipelines.</li></ul>                                                                                                                                            | Mar 2026 - Present  |

## PROJECTS

|                                                                                                                                                                                                                                         |                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>AI Mario Level Generator</b><br><i>HackMIT 2025 Modal Sponsor Prize</i> <ul style="list-style-type: none"><li>Built sketch-to-playable-level pipeline with LLaVA 1.5, H100 inference on Modal, FastAPI, React, and OpenCV.</li></ul> | Sep 2025            |
| <b>Context8 - context8.org</b><br><i>Agent knowledge system</i> <ul style="list-style-type: none"><li>Built self-evolving knowledge system for AI agents, turning solved bugs into reusable agent memory.</li></ul>                     | Oct 2025 - Jan 2026 |
